UC Irvine Machine Learning Repository

Condition monitoring of hydraulic systems

Donated on 4/25/2018

The data set addresses the condition assessment of a hydraulic test rig based on multi sensor data. Four fault types are superimposed with several severity grades impeding...

Dataset Characteristics
Multivariate, Time-Series

Subject Area
Computer Science

Associated Tasks
Classification, Regression

Feature Type
Real

Instances
2205

Features
43680

Dataset Information

Additional Information
The data set was experimentally obtained with a hydraulic test rig. This test rig consists of a primary working and a secondary cooling-filtration circuit which are connected via the oil tank [1], [2]. The system cyclically repeats constant load cycles (duration 60 seconds) a...

Has Missing Values?
No

Variable Information

The data set was experimentally obtained with a hydraulic test rig. This test rig consists of a primary working and a secondary cooling-filtration circuit which are connected via the oil tank [1], [2]. The system cyclically repeats constant load cycles (duration 60 seconds) a...
